

Technology Management

# Hosted Business Applications

All business applications from Technology Management can be hosted at our dedicated hosting centre, saving your business the burden of buying and maintaining your own IT servers and infrastructure. Instead, all you need is a Windows PC and web browser connected to the Internet.

## Flexible systems

Just like traditional 'on-premise' software, hosted business applications enable you to create systems that suit your exact needs. Technology Management can realise the vision of truly flexible hosted business systems thanks to its track record as a systems integrator, spanning more than twenty years.

## Robust reliability

Technology Management ensures optimum uptime because even the fail-safes have fail-safes. Backup generators, multiple hard drives, multiple servers, and cooling systems give Technology Management real redundancy so the high-end servers will continue to operate regardless of external conditions. As a final precaution, all your data each day is backed up off site onto tape.

## High security

24/7 monitoring, CCTV cameras, a steel encased server room, safety locks and more ensure that only authorised personnel can enter Technology Management's data centre—your data is always safe and secure. Firewalls, anti-virus software and SSL (secure socket layer) encrypted logins protect your systems from virtual threats, while communication between the server and your browser is over secure HTTPS connections.

## Fast delivery

Industry-leading connectivity allows for no-nonsense, fast transfers at all times. The result is that more users can access and interact with your hosted applications, faster.

## Intelligent maintenance

Technology Management's data centre is protected and monitored by automated support systems that permit real-time analysis, review, and maintenance. All technology used has been engineered throughout to avoid any connectivity, redundancy or power failure and all systems are monitored by our Microsoft certified specialist network technicians.

## Keeping you connected

As well as ensuring our data centre remains reliable at all times, Technology Management's consultants can support you in building a reliable Internet connection, complete with back up connections should your main line fail.

## Affordable pricing

Hosted business applications from Technology Management get you access to the latest technologies to keep your business lean, at a fraction of the cost of implementing traditional software. With no upfront cost for hardware or licenses, plus flexible monthly user pricing, hosted business software is the affordable alternative to run software.

## Full desktop or single applications

From a single application through to a full desktop solution, applications can include any of the following and more:

- Microsoft Dynamics NAV
- Microsoft Dynamics CRM
- Microsoft SharePoint
- Microsoft Office
- Pegasus Opera II & 3
